## TRAYECTORIA 1:

$$10 - 1(11) - 3.9(11) + 3.9(12) - 1.8(11) = 0$$

$$10 - 6.7(11) + 3.9(12) = 0$$

## TRAYECTORIA 2:

$$-4.4(12) - 3.9(12) + 3.9(11) = 0$$

$$3.9(11) - 8.3(12) = 0$$

11 = 2.05 mA

12 = 9.653 mA

## UTILIZANDO:

$$V = I * R$$

$$I = V/R$$

$$VR1 = 2.05 * 1$$

$$I = 2.12 / 2.2$$

$$VR1 = 2.05 V$$

$$I = 2.42 \text{ mA}$$

## PORCENTAJES DE ERROR

VOLTAJE

$$\% \ error = \frac{Vr(Teorico) - Vr(Practico)}{VT \ (Teorico)} * 100$$
$$\% \ error = \frac{10.021 - 10}{10.021} * 100 = 0.2$$

CORRIENTE

% 
$$error = \frac{Ir(Teorico) - Ir(Practico)}{IT(Teorico)} * 100$$
  
%  $error = \frac{5.2 - 5.18}{5.2} * 100 = 0.39$
